VERNON PUBLIC UTILITIES INSPECTIONS OF ELECTRIC UTILITY SUBSTATIONS

Substation inspection procedures ensure a minimum of two comprehensive inspections annually. These comprehensive inspections may encompass various tasks, including battery inspections, infrared inspections, and general station evaluations.

Note that record keeping policies implemented after 2018 quantify inspections by the number of individual inspections conducted, rather than the number of substations visited. Regardless of the reporting method, all substations undergo daily visual inspections to ensure their continued safe and reliable operation.

| YEAR OF INSPECTION | DUE | OUTSTANDING | UNITS |
|--------------------|-----|-------------|-------------|
| 2022 - 2023 | 134 | 0 | Inspections |
| 2021 - 2022 | 82 | 0 | Inspection |
| 2020- 2021 | 110 | 0 | Inspection |
| 2019 - 2020 | 124 | 0 | Inspections |
