The charges will be increased by 20.6 cents per kilovar of maximum reactive demand imposed on the Utility in excess of 20 percent of the maximum number of kilowatts.

The maximum reactive demand shall be the highest measured maximum average kilovar demand indicated or recorded by metering to be supplied by the Utility during any 15-minute metered interval in the month. The kilovars shall be determined to the nearest unit. A ratchet device will be installed on each kilovar meter to prevent reverse operation of the meter.

b. Service Delivered and Metered at Less than 4 kV: The charges will be adjusted each month for the power factor as follows:

The charges will be increased by 20.6 cents per kilovar of maximum reactive demand imposed on the Utility in excess of 20 percent of the maximum number of kilowatts.

The kilovars of reactive demand shall be calculated by multiplying the kilowatts of measured maximum demand by the ratio of the kilovar-hours to the kilowatt-hours. Demand in kilowatts and kilovars shall be determined to the nearest unit. A ratchet device will be installed on the kilovar-hour meter to prevent its reverse operation on leading power factors.

6. Temporary Discontinuance of Service: Where the use of energy is seasonal or intermittent, no adjustments will be made for a temporary discontinuance of service. Any customer, prior to resuming service within twelve months after such service was discontinued, will be required to pay all charges which would have been billed if service had not been discontinued.
